

AT HOME USE

Clear Gear Spray is perfect for your cleaning routine at home because it eliminates odors and kills harmful bacteria, including influenza, COVID-19, Athlete's foot, ringworm and staph infections like MRSA, among others.

How to Use Clear Gear

Clear Gear is easy to use – just spray the surface and let dry. Once Clear Gear is dry, the surface is ready to use. Here are a few pro-tips:

- Make sure the surface you are disinfecting is adequately covered, including all sides.
- For Clear Gear to be effective against all germs, the surface must remain wet for at least 10 minutes. This is because each germ is killed at a different time rate.
- For electronic screens, keyboards, mobile devices, etc., spray Clear Gear on a towel or cloth and then wipe the surface.

Where to Use Clear Gear

Clear Gear's special formula does not corrode facility surfaces gear, equipment or because it has no bleach, alcohol, chlorine or peroxide.
