

# HEALTHCARE FACILITIES

Healthcare workers and first responders are exposed to germs and bacteria everyday on the job putting them at risk for contracting COVID-19, MRSA/staph, blood borne illnesses (such as hepatitis and HIV), the flu and more. Using Clear Gear on PPE, gear and facility surfaces can help protect against a host of nasty infections.

## How to Use Clear Gear

Clear Gear is easy to use – just spray the surface and let dry. Once Clear Gear is dry, the surface is ready to use. Here are a few pro-tips:

- Make sure the surface you are disinfecting is adequately covered, including all sides.
- For Clear Gear to be effective against all germs, the surface must remain wet for at least 10 minutes. This is because each germ is killed at a different time rate.
- For electronic screens, keyboards, mobile devices, etc., spray Clear Gear on a towel or cloth and then wipe the surface.

## Where to Use Clear Gear

Clear Gear's special formula does not corrode gear, equipment or surfaces because it has no bleach, alcohol, chlorine or peroxide.

### FACILITIES

Physical therapy  
Chiropractic  
Minor emergency clinics  
Hospitals  
Dentist  
Doctor offices  
Orthopedics & Sports Medicine  
Medical Offices
